

Food Processing and Quality

Food processing is fundamental in the development of quality products that ensure the nutrition and health of consumers. In this context, Chile aspires to be an agrifoodstuffs potency; however, even though a significant scientific development has been achieved in this area, there are no scientific journals in the country that address the subject in depth.

In order to contribute to knowledge in Food Science and Technology, the journal Agro Sur invites researchers from this area of expertise to submit manuscripts for publication in a special issue on " Food Processing and Quality", which would be for the journal, a first step towards a new coverage on food related topics.

The topics of interest in this special issue include food processing, food safety and new products design with technological and health related functional properties.

Contributions can be submitted in Spanish or English as:

- Research papers**
- Short communications**
- Points of view**
- Reviews**

The deadline for receiving manuscripts is **August 15th 2017**

For information and manuscript submissions
